Trelleborg Hose is a world leader and well recognized around the globe in the areas of advanced polymer technology. The research and development centers around the world are continuously searching for better and modern cutting edge technologies that can set us apart from the other players those who are prevailing in the market. This organization is well known for the extensive knowledge of customers and their market expertise. They are using comprehensive application knowledge. This giant has various domains like engineering, automotive, wheel systems and sealing solutions.

Trelleborg Hose has a wide range of network in around 40 countries and employs around 20,000 people. This organization has around 120 manufacturing plants located all over the globe. This organization also develops and manufactures bonded hose solutions for the transport of oil and petroleum products across boundaries. There are rubber bond hoses that have developed dedicated offshore transfer systems. They are well known mainly for high vaccum hose applications and excellent mechanical strength.

Food Hose are specially designed for tail fittings and other assembling needs. These hoses de-convolute the inner surface and are well known due to their unmatched quality features. These are specified for applications where there is a need of hygienic hoses and are considered for industrial use. The amount of flexibility is to be increased if food, bio and pharmaceutical industries need is to be considered. These hoses are mainly used for protecting food components and other accessories of daily use. These are having high flexibility with the natural products as well. They are working on the principle of hose-in-hose concept. These are also having a unique feature of integrated bending for all types of flanges. If these hoses are having fully encased flanges then they are very much helpful in eliminating corrosion.

The Trelleborg Hose are having a long service life due to the quality of material that is being used in the manufacturing of the products. These hoses are always compatible with any type of climatic conditions and are durable as well. They are very less affected with water and highly resistant to corrosion. This brand also offers sub marine and floating hoses for transfer of LPG gases as well.
