Commercial Energy Audits Help Optimize Energy Expenses by [James Blee](#)

Article published on May 7th 2012 | [Advertising](#)

The use of energy is essential for running various processes in commercial buildings. But it is important that the use of energy should be efficient as the energy resources are scarce. Whether new or old all buildings require energy audits so that the wastage can be avoided. commercial energy audits is done by engineers who can determine the amount of energy like electric, water and gas being wasted by inefficient energy systems. These professionals determine the ways and techniques which can prevent the loss of energy and can also cut down energy consumption.

These engineers prepare the HVAC and MEP reports to demonstrate the energy efficiency. They can even prepare cost evaluations to determine what types of improvements are necessary. They even prepare reports for new construction, renovations and any building that needs to cut down the energy consumption. The auditing process starts with an overview audit where the technical advisor starts reviewing the client's energy bills and accordingly gives recommendations to lower down the consumption rate. The level 1 audit focuses on no cost energy conservation measures and the reports generated is used for analyzing how much energy costs can be saved from those measures.

The Level 2 audit is an in-depth study of the capital intensive components. The qualified energy audit technocrats assess your existing lighting system from fixtures to lamps to ballasts and bulbs and accordingly provide helpful ways to deal with the energy consumption issue. These audits are necessary in order to save the wastage of energy and also your business from paying heavy taxes and bills. These auditors work closely with your organization to create an energy reduction plan which is beneficial for you.

Contact an energy auditor and get your building audited today in order to reduce unnecessary expenses on energy consumption. It is always better to plan out energy audit so that you do not need to pay those heavy bills. Schedule an energy audit for your company and become a smart business owner.
