Use Reliable Application and Not ESEUTIL to Recover Corrupt Priv1.EDB by Maichaljuly

Article published on June 15th 2012 | Software

The users must always bank upon the application programs that have the potential of carrying out the kind of procedure they want, in a secure yet reliable way and in order to attain such a process the only way is to use third party applications and not the built in programs that come with no guarantee. The Exchange Server is designed to interlink all the Outlook mail clients available in its environment, creates a mailbox for each of their data and keeps check of the transactions being made via the different Outlook operators. Sometimes via the network connection; virus infections pass through and the Exchange Server data gets corrupted due to some or the other reason which makes the pub.edb or the priv1.edb files become inaccessible for further usage which is when it is necessary to recover corrupt priv1.edb with a reliable and suitable Exchange Recovery program that is designed with the efficiency and potential of recovering data securely and intactly.

Why ESEUTIL Mustnâ€™t Be Used?

There is a wide variety of rules and recommendations that are associated with the ESEUTIL program which is why it is suggested that the users do not opt for it. Some of them have been mentioned below:

If using ESEUTIL you must make the information store offline.

At a time you are allowed to run ESEUTIL on a single ESE database only.

When using ESEUTIL, the users are suggested to firstly create a copy of any of the files that they are using including the entire .stm as well as .edb and log transaction files by the format of .log and .chk. Then put them aside and donâ€™t use them till you have an urgent need of getting back to the genuine state because in this case the copy of the backup files arenâ€™t moved so that you can always have a safety option if anything goes wrong.

When you got a test lap use it even if it is virtual or physical, practice and jot down each step prior to performing them on the production system.

What Must Be Used?

In such cases only third party applications must be used because they come with no limitations or rules to Recover Corrupt Priv1.EDB and smoothly carry out the procedure of Exchange Recovery in a technological yet ease to understand procedure.

Exchange Recovery

To recover corrupt priv1.edb or even pub.edb the users can make use of the Exchange Recovery program which is one of the finest available software programs for the same.
