How Does an E-cigarette Function?

by Shala Ohms

Article published on May 28th 2012 | Supplements

Electronic cigarettes are a preferred choice for people who are bouncing back from smoking addiction. They are also a much a better substitute to nicotine patches because these products give someone the feeling of actually smoking-- the heat included-- without the carcinogens, smoke, and health and fire hazards. Additionally, smoking electronic cigarettes does not lead to numerous ailments and conditions for smoker and second-hand smoker alike. Now, how exactly do e-cigarettes work?

E-cigarettes aren't used just for the reason that smoking them involves breathing in vaporized nicotine. The e-cigarette vaporizes a liquid solution known as e-liquid which is what gives the user that nicotine flavor. The nicotine gets vaporized once air flow from the mouth piece is detected. Essentially, there are three components of an e-cigarette, and they are the atomizer, cartridge, and the battery.

The batteries activate the electronic cigarette's atomizer then users can have the choice to purchase either automatic or manual batteries for the device. Manual batteries are known to be more dependable and won't turn on when the e-cigarette is accidentally shook which commonly happens when it is kept in a bag or a purse. Alternatively, those with automatic batteries are more similar in appearance to normal cigarettes and are more user-friendly.

The atomizer in US e liquid cigarettes dissipates the liquid stocked in the cartridge. The liquid is heated via the power produced by the batteries. Atomizers can last from one to three months or perhaps longer, depending on how often the user smokes. However, lengthened usage reportedly results in objectionable flavors. It is suggested to review the user's manual to know how regularly the atomizers should be changed.

Not all e-cigarettes are created alike, so it's a good call for users to look for reviews. There are various e-cigarette products in the market such as the Joye 510 which is deemed by some as some sort of upmarket e-cigarette because it contains numerous components like bigger cartridges which hold more e-liquid and is more user-friendly compared with other e-cigarette brands. They also supposedly has longer-lasting batteries according to its users.

Smoking e-cigarettes is deemed by most as an practical substitute to smoking regular cigarettes. By finding out how to appropriately use these products, the experience will seem more like the real thing. If you are curious to learn more about the functions of e-cigarette and e-liquid, then there are many websites which can help you.
