Botox v/s Anti-Aging Creams

by Pariswilliams

Article published on June 26th 2012 | Fitness

Wait before you disregard wrinkle creams and vote for Botox. Botox has become the favorite in Hollywood and sounds pretty simple, as it is just an injection. When you compare it with an anti-aging topical formula, you would be shocked.

Effectiveness

A typical Botox injection covers just 5 percent of your face area. On the other hand, you can apply an anti-aging formula on the whole face. Moreover, certain spots on your face are not even suitable for injection. No such restriction exists for a face cream. You can apply it in every nook and corner of your face. If a certain area has more wrinkles, you can slather more cream, but you cannot have a double dose of injection.

With time, the area adjacent to the affected area, which was injected, becomes more prone to getting wrinkles. Studies have also shown that injecting your skin numerous times with Botox weakens the skin and damages it. Such side effects are not even heard of in case of anti-aging creams. Superior quality creams, in fact, nourish and moisturize the skin, encouraging its own collagen production capacity to rejuvenate. They also provide sun protection and some even contain skin brighteners.

Poison

Botox contains poison. The actual name of Botox is botulinum. This is a lethal neurotoxin, which can harm or kill somebody, if given in huge amounts. When Botox entered the market, news spread that it removed wrinkles. Do you know how exactly it does that? Well, it paralyzes your skin muscles and this is how you get a porcelain complexion.

On the contrary, wrinkle creams work with your skin to encourage its natural process of producing collagen that removes wrinkles. The creams contain organic ingredients that are clinically tested. Applying the best cream on your face is like eating fresh fruit.

Cost

You spend many thousand dollars to get your muscles paralyzed. This is what each shot of Botox costs. This single shot lasts just 30-60 days. You spend another thousand dollars to get another shot. It is like giving a shock treatment to your face every month. You feel numb already.

On the contrary, you can get a wrinkle remover online for less than a hundred dollars. It lasts longer and the results are permanent too. You save significantly on shopping from online stores.

Range of working

Botox has a narrow range of working. It targets only motion wrinkles, which is just one issue of aging. Motion wrinkles are those that appear when you do facial movements. What about the fine lines, crowâ€™s feet, blemishes, sun damage, pigmentation, eye bags, and other such issues?

Only the best deep wrinkle cream can attack all the signs of aging in one application. Moreover, those seeking a complete facial rejuvenation can hardly benefit from Botox. For them, a topical skin rejuvenation system is the ideal solution.

Do you still want to prick your skin? It is time to change your perception about wrinkle creams and give a try. Inject freshness, not poison into your skin.
