Real Time Design Tools for Customized Banner Printing by Juan Schaar

Article published on December 21st 2011 | Advertising

Often one wonders whether there is any end to perpetual innovations in Computer Aided Designing and Printing of diverse custom-made Vinyl Banners/posters/graphics. But, judging by the frequency at which technology has been undergoing revolutionary changes, such a possibility seems a far-cry, which should both be cause for celebration (as there would be continuous scope for bringing in design-sophistication) as well as increased responsibility (as it would demand frequent investment on installing newer and improved software applications). Having already reaped the revolutionary benefits that these technological tools have offered in outdoor as well interior display advertising/promotional endeavors, it is hard to imagine the extent to which these catalysts will lead us.

Having said that, it leads us to know what constitutes a technology-aided designing, and how its constituents make deigning truly simpler and virtual. To begin with it is anybodyâ€™s guess that a computer is a prerequisite:

Computer: Although a computer is a pre-requisite, it needs to be supportive of programs that are crucial to designing. Therefore, configuring the computer in a way that accommodates integral design programs becomes important.

Alternatively, you have the option of considering MAC, known for its comprehensive features, is aptly considered as the designerâ€™s computer. Additionally, there are various models â€“ Apple iMac Models, Apple Computers for Graphic Design, All-In-One, Apple iMac Software â€“ with unique set of features.

Whereas owning and installing technology platforms is the first vital step towards realizing technology sophistication in custom-designing vinyl banners/posters/graphics, orienting your designers to the softwares that actually fuel creative excellence and delivery efficiency is equally important â€“ Adobe Creative Graphical Suite, including Photoshop, Illustrator, Indesign, Dreamweaver, Acrobat Pro and several other tools, is widely acclaimed as the recommended creative software program for designers.

While creative software program enable creative excellence, there is complementary Project Management Softwares that help in organizing work and delivery in the face of ever-increasing list of clients â€“ Basecamp, Daylite and Studiometry are the proven options in Project Management Softwares that substantially reduce delivery and logistical problems at a relatively affordable investment. Some of the notable functions that these project management softwares accomplish are: To-Do Lists, File Sharing, Messages, Milestones & Time Tracking, and Graphic Design Time Tracking.

Until now, it has been the inputs that go into making vinyl banners/posters/graphics customized to clientsâ€™ requirements, but there is one more phase that remains to be narrated â€“ the printing. Unless you have printers that can deliver quality as decided by your inputs, the exercise of implementing creatively excellent designs will go futile. Therefore, processing your designs on large-format inkjet-printers â€“ manufactured by global leaders in digital printers such as KVR-pixojet, Mimaki, Jetta, Xerox, Roland, Kodak, Encad, Colorspan, BannersPDQ, and Hewlett-Packard â€“ and PVC sheet material ranging 9 ounces to as heavy as 22 ounces per square yard be borne in mind for adhering to compliant quality standards.

Possessing and employing such Real Time Design Tools are indeed recommendable for designing

and delivering virtual-quality custom-made Vinyl banners/posters/graphics for outdoor promotions as well as interior decoration.
