Obtain Professional Honda Technician Training from Centennial by Jason White

Article published on March 27th 2012 | Education

When it comes to automobiles, Honda is regarded as one of the most innovative and eco-friendly makers.

If you're interested in becoming an automotive service technician and specializing in Acura and Honda products, Centennial College in Toronto offers a perfect program to get you started. Their Automotive Service Technician Acura/Honda Apprenticeship program provides you the best of both worlds: classroom training and work experience with an Acura/Honda employer.

Centennial's program is considered a modified apprenticeship program or MAP. Unlike traditional apprenticeship programs that require you to obtain employment before you can take courses, the MAP allows you to interview for a spot in the program. This particular program offers you longer and more in-depth technical knowledge than traditional programs. It's set up like any job, so if you pass the interview process successfully, you will be granted a spot in the program where you will gain automotive knowledge and work for a Honda Canada employer.

Every eight weeks, you'll alternate between classroom study and working for a Honda employer for a total of 32 weeks with each. The school portion of this program is held at Centennial's Ashtonbee campus, which is the largest on-site transportation training facility in Canada. For 32-weeks, you'll study core courses including: Drive Train Systems, Electrical/Electronic & Fuels, Engine Systems, Work Practices and Procedures and Suspension/Steering and Brake Systems.

The best part about any apprenticeship program is that you get to apply your classroom knowledge to the workplace right away. You'll be treated just like a regular employee and get paid for all the work you put in.

The classroom knowledge that you learn will give you an advantage because you'll learn specialized skills that relate directly to Acura and Honda products.

Honda is synonymous with innovation, green technology and advancement; it's also more Canadian than you might think. This company employs over 4,300 Canadians nationwide and purchases over $1.1 billion in goods from Canadian suppliers annually. Honda Canada manufacturing has enjoyed a successful 25 years of operation. While the company has a long lineup of cars, Canadians have embraced the Ontario-made Civic and made it the top passenger car sold for 13 years running! This company also prides itself on its commitment to energy efficient practices. Its Canadian plant recycles 99 per cent of its product wasteâ€”the first in North America to be able to make this claim. From hybrid cars to dealerships powered by wind turbines, this world-class company is regarded as one of the most fuel-efficient car companies, and is continually looking for the next innovation that produces a quality product while maintaining nature's delicate balance.

If automotive training and working for a company that's cutting edge appeals to you, starting a career as a Honda technician may be your perfect fit. This program is offered in all three academic semesters (fall, winter, summer) so you can start your career when you're ready. To find out more about what this program offers you, discover more here.
