Article published on June 8th 2012 | Affiliate Programs

Modern day cell phones are unlike earlier cell phones. The cell phones of today are much more capable and much more â€œsmart.â€• However, the era of smart phones began with the dawn of the Android operating system, an operating system from the developers of Google. With the power of Android, smart phones were born, and since then there has been no turning back. However, the most impressive trick in the Android bag is their app store. android app development teams have created a sort of Paradise for users who want to have applications on their cell phones. This is as Android has the largest app store in the whole world. The number of applications in their app story is countless.

Apps make the consumerâ€™s life much easier since one does not need multiple devices if one has a smart phone in oneâ€™s hands. With the key to the internet, what more does one need? Over that, add the apps and you have a total winner. Android app development teams work constantly, to improve their own creations and to come up with newer ideas and newer apps.

However, when the question of smart phones and applications arises, we can never rule out completely, the cellular giant, Apple. Apple iPhone is reportedly the best smart phone ever made. iphone app development has created technologies that have never been thought of by any designer before. With technological breakthroughs and other brainwaves, it may not have the sheer number of the Android applications development team, but it more than makes up for that in terms of brilliance. iPhone app development has created shining stars in the software market such as iTunes, iCloud and so many other novel technologies. All this has just aided in providing us a quality lifestyle. Therefore be it Android or iPhone, we are blessed to have them both.
