Article published on April 28th 2012 | Alternative Medicine

Electronic cigarette is a new, breakthrough technology that has been introduced in the new millennium. The advent of electronic cigarettes has brought about a change in the smoking patterns and habits of the potential smokers.

Basically, the electronic cigarette is a digital device that works with the help of a battery and it produces â€œvaporâ€• instead of the traditional smoke. An E-cig or, shall we say, the vaping device uses nicotine cartridges of variable concentrations to emit vapor. The device is basically made up of a lithium battery, a cartridge and an atomizer.

This electronic device emits vapor that has nicotine concentration in it. The cartridges are refillable and they come with different levels of nicotine and they also come in different flavors. The atomizers that are attached to these digital assembling are used to vaporize the liquid solution in the cartridges. This solution is made up of water, food additives, nicotine and flavors. The ego c atomizer is an example of the atomizers that are used in the device.

These digital â€œvaporsâ€•, as they are usually referred to, do not emit any smoke and they do not even have to be lit. These electronic smokeless cigarettes are hence, free of carcinogens. One does not have to worry about carbon poisoning or of suffering from any liver or lung ailments.

Moreover, one can even smoke these vapers indoors without having to worry about inflicting adverse effects upon anyone around since there will be no passive smokers in the case of an e-cig. The device itself is pretty much portable and easy to carry around, refill and is even very easy to service.

Furthermore, there are various other forms of varieties and assortments of this electronic device. For instance, there are delrin drip tips that are at times used in place of the cartridges. These drip tips allow the smokers to do direct dripping straight to the atomizer without having to remove the tip.

The electronic smokeless cigarettes has no ash, no smoke, no tar and it definitely does not give one yellow teeth. It even costs one less than it does to smoke the typical tobacco smoke. The battery life of this electronic device is also durable and every recharge lasts for an average of four to five hours.
