Article published on February 17th 2012 | Hardware

If you want great audio quality from your audio device then itâ€™s important to pay attention to the brand of the gauge wire. Gauge wires world like human arteries. They are used to send the auto signal from the device to the speaker, just like arteries carry blood from heart to various parts of the body. There are many companies that are selling 14 gauge speaker wires and 16 gauge speaker wires, but you will face a difficult time in finding the best gauge wires as there is a wide range available. Also, there is lack of knowledge about these wires among the customers thereby leading to wrong buying decisions. Thus, it is important that before you purchase a gauge wire you gather adequate information about them.

Irrespective of whatever cable you are using, it will be subjected to resistance but the heavier ones like 14 gauge speaker wire and 16 gauge speaker wires have got reduced resistance, thereby increasing the output of sound. The thickness of the cable will largely depend upon its length. Like, if you are using a 15 feet cable then you need to make use of a 16 gauge speaker wire, for up to 12 feet you can use 14 gauge speaker wires. The thicker cables come for a price and thus you should buy them only when the length of the cable is required is too much.

Many people leave the wire end of the cable television bare, which is a wrong practice. Ideally, it should have a blueberry or spade terminal. Connectors are very much required for the purpose of connecting and detaching the wire without affecting the quality of sound. Also, you need to ensure that the wire is fastened properly and there is no corrosion in the terminal.

If you have multiple speakers then it is not that you need to have same length of wires for each of the speakers. You should use only the required length of cable. There is no point in buying excess cable, it will only result in loss of you hard earned money.

You should always verify whether the dimensions of the 14 gauge speaker wire and 16 gauge speaker wires are suiting your requirements or not. By having correct and adequate information on 14 gauge speaker wire and 16gauge speaker wire, you will surely be able to make a sound buying decision .

If you have a high quality surround sound setup or if you want to experience an excellent 5.1 channel sound in order to enjoy movies, songs or games, you will require much thicker cables, as they are effective in reducing the signal loss. Thin cables are preferred for simple uses as they are affordable and easy to use and maintain. Apart from the length as well as gauge, the quality of the cable will also depend a lot on the material with which it is made of. The wires having superior shielding will repel interference to a great extent.
