When getting a new car, the first thing that you'll check are its parts. Regardless if the vehicle itself is a good one but when its parts are substandard, the car won't last long as it should. Choosing the right parts is important, and that is where this talk about ***dana 44 rear axle*** comes in hand.

Dana is an axle manufacturing company that is renowned for its quality parts, and most of the good automobile companies go for Dana axles. They are not only sought by car companies, even the aftermarket of automobiles also approach them for parts.

The production of dana 44 rear axle began in the last 20th century. The first piece is understood to be produced in 1940, and because of its increasing demand and extensive use, the rear axle continues to be being used. Dana also produce independent suspensions in the rear axle and they remain to be a well-liked in the industry.

There are a variety of automobiles that have Dana 44 fixed in them. Whether it is the rear axle or the front axle, Dana axle is preferred by all, and different vehicles , including jeeps have these fixed in them. There are four wheeled vehicles which are fixed with front and rear Dana 44 axles.

The axle has 8.8 inches diameter and weighs heavy. The pinion of Dana 55 is far different from the others in the market. Its contact among the ring, tooth and angle are better. The ring is also stronger, and so is the pinion of the Dana 44 axle. Regardless if it is the front or rear axle, both of them are considerably stronger. Previously it was used in the back of the jeeps, and Nissan pickups. However, they're now used in a wide variety of 4 wheeled drives.

The locks is another thing to consider. Every part of the vehicle, no matter how small it is are considered important. Just as it is essential to stress about the axle, it is so important to think about the locks and spools you use. The detroit locker is just the perfect ones, that are durable, and go best with good automobiles. This locker provides complete torque to both the vehicles, and allows the vehicles to improve and decrease the speed automatically, when needed. They area available in the market in different types to meet the demands of various axles.
