Online UPS system is a Perfect device for Power Back-up by Abhilasha

Article published on December 20th 2011 | Marketing

UPS system is the most popular device that helps the user to retain the power when there is voltage fluctuation or power shortage. It is being used all over the world and it is considered to be the best alternative for power supply. It is widely believed that there are only two types of online system (1) Standby UPS (2) Online UPS system. But there are also Line Interactive UPS, Standby online hybrid UPS, Standby â€“Ferro UPS, True online UPS, Double Conversion online UPS that is available in the market. Though you will find that the online UPS is expensive compared to Standby UPS but still it is highly being consumed due to its highly polished features. There are many places still in India where the electricity shortage is a common problem and to avoid the trouble usually people opt for UPS system.

Recently, most of the UPS manufacturer Mumbai is focused on the online UPS systems with Eco mode operating regime and it is also possible to run with low power single phase system. It is not possible that through a single UPS type you can operate all the applications. Every UPS has its unique features and that helps to run the system while there is a power interruption. It avoids momentary power lapses by providing energy from its own inverter. It even supplies power when there is a voltage fluctuation as this might damage the electric appliances causing financial loss and appliance damage. Online Double Conversion topology though reduces single phase UPS efficiency up to 90%. There are numerous UPS dealer Mumbai who takes up the responsibility to design and develop online UPS system.

The most common type of UPS is the Double Conversion online UPS that is above 10 kVA. UPS system provides instant back up since there is always the battery in the circuit. You should always make a wise decision while selecting the UPS. Your decision should depend on the factors like the characteristics, features, advantages and disadvantages of the UPS system. UPS manufacturer in Mumbai deals with the finest and high quality UPS so that it provides a smooth power supply whenever it is required. It has greater efficiency and highly reliable device that serves your purpose during power fluctuation. UPS dealer in Mumbai offers a wide range of products to the customers that perfectly suit their requirements. It allows saving data and operating the appliances at that point of time when you mains stop functioning.
