How to Share your computer to remote user by Arun Kumar

Article published on May 26th 2012 | Networks

Computer have changed a lot for all of us today and thus at time handling them becomes a difficult. Humans have a habit to share the information and thus when we face problem with any device we take help from others ad share information with each other. However, it is not always possible to be near the computer you want to repair. However, we come across such situation when we cannot find any one close enough to help us. Therefore, there have been some tools, which you can use for sharing your computer with a remote user so that you can get help form someone who is not even closer to you. These tools are from Microsoft as well as from other manufacturer like Google and Log Mein. So let us see some of them.

From Microsoft

Step 1

If you want to connect the computer suing the Microsoft utility, please right click on the Computer and then please select Properties and then Advance System Setting.

Step 2

Once you have advance setting please click on the Tab that says Remote and then add the click one of the of option that you see at the bottom of the screen.

Step 4

If you want to share your computer to another Windows Vista or Windows 7 computer, please select the last one or else please select the second one.

Step 5

Now please click on the Select User to pick the user you want to all the computer connection to. Now click on the add button and then please enter the user name and then Check Name. This will help you connect the computer on the home network or at the office when both the computer are in a network.

The other step that you can use to invite someone on the computer is Remote Assistance

Step 1

Please click on the start menu, then please click on the All Program, and then look for Remote Assistance.

Step 2

Once you have the remote assistance please click on the one that says Invite some to help you, and then select the one that says Type an email address, and then click on the invite this person link.

Step 3

Once you have click on the invite this person link please click on the continue button and then set

the expiry time for the invitation.

Step 4

Once you are done with the time please click on the one that says Require the recipient to use a password. Once you have set the password please send the invitation to user you want to share your computer with.

Step 5

Once the recipient gets the email and then click on the link he will prompted for the password once he enters the password e will be able to see your screen. However if you ever fell that you want to end the connection please click on the one that says Disconnect.
