Heavy Duty Wheels â€“ Built for the Toughest Applications

by James

Article published on February 21st 2012 | Auto

Wheels are the heart of any piece of rolling equipment. There would be no motion without wheels. While some industrial applications require normal wheels some use heavy duty wheels . These heavy duty wheels are strong, durable and can easily bear the weight of fully loaded platform trucks. These wheels are excellent for any type of industrial applications like high capacity, precise alignment, platform trucks, material handling and high temperature applications. These wheels are designed for heavy duty, extra heavy duty and super duty applications. They are manufactured using premium quality materials like gray iron, cast iron, hot forged steel, phenolic resin, polyurethane and nylon which provides them high strength and load bearing capacity even when they run on uneven surfaces.

These wheels are available in different load capacities, materials, diameter, width and bearing type. These wheels are precision engineered with round edges to finished tolerances. They are also abrasion resistant and have a long service life. These wheels can withstand extreme heat and the continuous wrap process makes this wheel a longer wearing product with higher resistance to chipping and fraying.

Being heavy duty these wheels reject floor debris and are resistant to most chemicals, grease, solvents and acids. They are even stain resistant and have zero water absorbing capacity. Quiet, easy rolling and shock absorbing these wheels are also best suited for most floor surfaces. These wheels are fully tested for their load bearing capacity and do not develop flat spots understanding loads. These tough wheels can also operate on a steel rack for minimal guidance and rolling effort.

These wheels serve as an excellent purpose for food service equipment, small waste bins, platform trucks, heavy material handling, trolleys, and foundry cooling lines, auto claves, baking ovens, textile carts, mobile cranes and amusement parks. Just decide on your industrial application and get these wheels to do their work.
