Article published on May 19th 2012 | Technology

Android is the most famous operating system which develops apps for the mobile and tablet computers. Android provides a convenient environment for the android app developers to develop useful and profitable apps using the platform. These apps are developed by the developers for the market, where the customers buy or get them for free for use in their mobile, smart phones or computers. They are accesses by the people through the app store. However, for the apps to get marketed in the app store, the app store takes a percentage of the money made by the apps through the app store.

There are certain facts, which the android app developers and many people should be aware of regarding the app store and apps. Many people who do not have an idea of the mobile market and mobile development think that all of the app costs go directly to the developer. When a certain number of copies of app sold, the director does not get all of the earnings, but only gets a part of it. However, the percentage of money, which the developer gets from the app, depends on the different app stores. Android app developers should have a proper idea on app store fees, percentages, payout thresholds and payouts and what other multiple markets are offering.

Perfect idea on app store fees is essential for android app developers. Developerâ€™s fee varies between different app stores. Fees are especially important during the start of business or when the income level is very low. However when a developer starts developing more apps and start to earn more, app store fees becomes less prominent. Mostly app store fee are on a percentage basis. So, you get more money when you sell more. Most of the income for the store is from the paid apps and the store takes its money before passing on to the developer. There is a set standard for the app store to take on apps. They are allowed to take 30% of what they get on the apps. Rest of the income goes to the android app developers. However some of the app stores give even higher percentages to the developers. App stores set up a percentage for the developers depending on the traffic they have for their store.

Setting up payout thresholds and schedules is also important for the android app developers. You donâ€™t get your money immediately after making a sale of your app, which is unfortunate. App stores hold your money for a certain period of time. Most of the app stores give payouts after passing a few days of a month or even a few weeks. Due to these payout thresholds, a developer should keep in mind that you will not see any money until a certain period of time after selling your apps.
