Three Network Coverage VS Your Internet at Home by Shaly Criston

Article published on February 1st 2012 | Technology

It is so amazing how technology changed peopleâ€™s lives. Almost all if not everyone owns a mobile phone. I know you may have heard of someone saying this â€œI cannot live without my phoneâ€•. Well ye it is a bit exaggerated but for most people their everyday lives revolves with the help of their phones.

Over the years there have been many developments and inventions, from smartphones, laptops to tablets etc. And companies who are manufacturing these gadgets are not slowing down and they are still developing more devices for their market. With the emergence of these gadgets you cannot separate it from another important tool which is the internet like the three network coverage provides.

Simple broadband vs. mobile broadband

Just to give you a very brief background about mobile broadband let us start by defining what it is. First let us start with the word broadband. Basically it serves as our bridge to connect to the internet. It lets the user to forward or receive emails, it helps people to stay connected with others through different social networking sites, downloading of files (e-books, audio books, music, movies, etc.) and many more are made possible.

Mobile broadband serves the same purpose although the distinction is that the system you will be using is from a telecommunications company like the ones mentioned in 3gcoverage.co.uk. Imagine how convenient it is to have one. Even if you are outdoors you can download apps for your smartphone or tablet. You can also download games, songs, movies into your laptop. And most importantly if you do business using your phone and internet you are not required to just stay at home or at the office because you have the luxury of having an internet connection where ever you go as long as you are in the coverage area of your provider for example the three network coverage.

What are the different ways to connect to your internet provider?

The following are the different ways wherein you can connect using mobile broadband:

â€¢ For gadgets like tab/ laptop you may opt to use a sim or a micro-sim. Simply insert it just like the one you use for your cellphone.

â€¢ If you have company like friends or maybe if you are out of the office and on a business meeting with others who need internet connection, a MiFi is probably the best for you. It can connect different Wi-Fi devices all at the same (usually limited to 5).

â€¢ For single users a USB dongle is suitable for your laptop

Before signing up for a broadband plan like three network coverage one of the things you must consider is the featured data allowance which is the capacity of monthly internet use. For example if you are fond of downloading large amounts of files you should get a big data allowance plan. The following are the list of internet use that is suitable for bigger data allowance. Hope it could help you answer and decide which data capacity you need.

â€¢ Love to watch videos online

â€¢ Fond of listening to streaming music

â€¢ An online game enthusiast

â€¢ Always watches TV programs online
