Repair your Car like New with Frame Straightening Racks by [Julia Roger](#)

Article published on January 18th 2012 | [Auto](#)

Frame straightening is a technique that involves getting a car into its former shape after it has been deformed after an accident. When a car falls in an accident, the first thing that has to be done to bring the car back to its original shape is to straighten the frame. Only then can the other repairs be done. The frame rack is a huge structure on which the car is faced and attached on all sides. Frame straightening is not just about exerting a lot of pressure but exerting a lot of pressure in all the right places of the car, so that it becomes as new as before. Frame straightening also comes in useful when a car has to be remodeled. Those who want to get a customized car have to redo their old car and they often want to give it a new shape. The frame rack can be hence used to pull or stretch the car as required. It also comes with a lot of accessories that helps one in achieving the perfect shape for the car. It goes without saying that indeed a lot of area would be required to install a frame rack.

And installing a frame racks does involve a lot of investment as well. Operating a frame rack also involves a degree of expertise but the modern ones are more or less easy to work with after the general rules are strictly followed. But it also has to be remembered that any car mechanic cannot work with a frame rack. Specialized training is needed to learn to handle this equipment, only then it can be successfully used to remodel a car.
