Hire Open Source Developers for Open Source Development by Cisvinita

Article published on December 5th 2011 | Web Design

In present era open source rule the web development field.Joomla,x cart,zen cart,drupal,dotnetnuke,cakephp,ajax,rubyon rail and magento are the buzz words in the web development town.One of the most prominent reason why open source application development is so popular now a days is it allow the user to change or increase the software as per their requirements.

Ask for any area, open source website development have answer for almost all kind of development whether its corporate website development,corporate intranet and extranets development,online magazines,newspapers,publications,ecommerse and online reservations development,government applications development,small business website development,non-profit and business website development,personal and family home pages development. Now covering all these features requires an expert touch of open source developers who have good knowledge and enough experience in this field as thats what make difference to your open source application development.

Each of these open source software development requires open source developers with specializations,like the x cart demands a developer who is expert in x cart customization,php application, mysql,javascript,xml similarly drupal demands open source developers with knowldege in mysql 4.x,mysql 5.x,msaccess,sql server,php4.x,php5.x,smarty,mvc,html/css,dhtml,javasvript, xml,web server,php4.x,php5.x,smarty,mvc,html/css,dhtml,javascript,xml,web services,payment gateway integration and ajax.So if we look at all these platforms then php,ajax,xml,html,xhtml,css , javascript and mysql are the core of any open source software development.

Its a wide topic in itself,one need to be clear about their requirements.Say if you require only the customization of the already developed open source application,then it doesnot make any sense that you waste in money in hiring open source developers for the whole application development.With proper requirement analysis you save a lot of time and money and get utilize that in other quality work.Going for open source developers who are available o n weekly,hourly or monthly basis would also be a good choice as their is a stiff competition in the open source application development now a days so you need to have an expert at your end to deal with all the latest changes .

Its a rapidly growing field with immense possibility in it so after providing with your project specification for open source application development you require open source developers who can start working on that within 24 hours.By choosing the right one you are half done but the real challenge starts after allocation ,you need to monitor project undertaken by your assigned developer,project timetable and the outcome you expect from them,follow ups of development process for confirmation of project staying on right way above all their should be proper interaction and it should give services same as an in house developer.The open source website development should be of such high quality that you will can see development in the business through it .

Open source is like an open book from where you can extract anything and use that in your own way for open source application development . So get an open source developer a your end and explore the various possibilities of various open source programs and use the best features of open source to develop the softwares of your choice.
