How to Add a Product Grid in Magento Web Design by Deniel

Article published on June 7th 2012 | Web Design

It is very difficult to add the product grid list of static pages in Magento. It is easy by adding the code. But the difficult thing is that on which line that code is added and on which place we can display it.

Today, in the world Magento is widely used as open source for creating strong ecommerce web applications. Magento Development Team and Magento Developer use the in built functions for create any ecommerce design or requirement. However Magento is complex and web designer and as a industrialist you can overcome as tenanted.

You can change the default theme without changing the PHP code and add the product grid in Magento.

Magento provides the experience of users and strong back end of user friendly application but the main disadvantage is that it is using lots of files. Opportunely, the tool which gives the location of files, you can initiate it in the admin panel and you need to logging in to admin panel and you have to click on System and configure it. In this page search the Current Configuration Scope and choose the website option from the drop down list and then click on Developer on the left hand side Menu.

Then look for the debug section and select the option Template path Hints and then click on Yes and save the Config file. After that you need to refresh the home page of the Magento Store, you will show lots of tags and boxes of grid view.

After situating the XML files, you can modify or copy and paste the code form one page to another page.

For changing the design of your home page you need to go to the admin panel, or abck end and navigate to CMS and select Manage pages. Choose the particular home page to initiate the editing tool. Then take away any unnecessary HTML code from the content and then add the call for list.phtml. The code should not be inner side of the div tag that will limit its size.

When all of these steps are done, save the changes made and refresh the Magento store once again. You may encounter an error stating, "There are no products matching the selection."

After completing all the steps which are mentioned above displayed are being completed, save all the changes and once refresh the Magento store again. You may meet with the error stating, There is no any product matching.

You need to just check the proper category ID to get rid from the error. You need to choose proper category ID for putting products in the grid view.
