Snow Plows - Answer to Nature's Occasional Fury [James Blee](#)

Article published on January 30th 2012 | [Auto](#)

Houses, roads, shops all covered up in snow; they sure make for a pretty picture. Such picturesque photographs make exemplary postcards. Unfortunately, the story behind such pictures remains unheralded; these could be a worst case scenario for general public, administration, trade and also they hit development work in the area. Snow-filled roads and rail tracks cut off contact with the outside world and worse is the electricity being hit in such a situation.

Snow plow is an instrument at the front of a vehicle to remove snow from roads or an area. The vehicle will have blades attached in front to accomplish the task. It all started with wooden wedge-plows drawn by horses and with advancement of technology, the horses were replaced with machines.

The use of salt was also experimented time and again but since it was having adverse impact on the roads, the snow plow gained precedence.

However, a lot depends on the kind of Snow Plows that are being used up for the purpose. During heavy snowfall, it is a herculean task to clear the area. Visibility, technical expertise and quality blades are few factors to be kept in mind. Since, the work is phenomenal, it is playing safe to tie up with the best in the business. One of the experienced hands in the business would be boss plow parts.

The competition in the arena of snow plows is ever increasing and in a world of survival of the fittest, the meanest machine is the most sought after ones. With upgrades of existing models in the market every new moon, the boss plow parts have made a niche for themselves in this field with use of cutting edge technology and state of the art engineering
