Article published on June 30th 2012 | Babies

Some of the best moments in life are brought out when you feel like you are defying gravity. Itâ€™s an amazing way to push yourself forward, pull yourself up and keep rocking forever â€“ weâ€™re talking of childrenâ€™s swings, the perfect way for a child to start life and keep swinging in a world of their own with no inhibitions in sight and nothing to care about. As parents, you do not just present kids with swings, marked by planks that wag along with frail chains to support them. Swings are personifications of freedom, where the first feelings of flight, of being in control while being totally carefree are dawned upon kids even as they learn a thing or two about the principles of science from the whispers of the gushing winds that blow past their ears.

Childrenâ€™s swings represent the embellishments that turn your gardens into fun-filled lands of fantasy that your kids would love to get to after a hard day at school. And if you thought swings were just the poles that would let your baby rock at set rhythms at designed speeds, you would be surprised at the kind of innovation that has been packed into swings, making them such universally applicable, adorable sets of outdoor companions that your children would refuse to be without. While the typical swings that would immediately come to mind would be the single swings that feature powder coated frames and contour seats, childrenâ€™s swings are typically much more than that in terms of varieties and applications. For instance, the wooden double swing is good enough for kids who are past the age of three, are sturdy structures that merge well with the natural beauties of your carefully crafted garden landscapes.

There are swings that feature combinations of swing and glider sets, coupled with adjustable ropes for varying heights, rocking in terms of variety and value, even as you could choose from among the dual purpose swings that double up as baby swings that get converted into single swings as your kid grows and needs more space and air to explore. In most of these cases, the idea behind childrenâ€™s swings is not just entertainment and leisure, but also that of building confidence and imparting a sense of self-reliance, where physical development is as much a part of the game plan as are psychological aspects of growth. Swings are essential parts of your childâ€™s growing years that would make your garden more liveable and lovable.
