Article published on March 16th 2012 | Boating

Boat and its accessories are generally quite high cost and if you do not choose them with proper guidance then you may loss a good amount of money. There is a deep relation between the boat propeller and the engine that is used in the boat. In many cases it is seen that the engine is getting damaged earlier than what you think. It may be because of the propeller..

The propeller you choose does not only depend on the engine. It is also dependent on the way you use your boat. If you ride your boat in plain water then the requirement is quite different that those cases where the boat is used during high tide or in wavy water. None of the propeller is appropriate in every situation. So you need to choose according to your requirement. In most of the cases you buy a package deal of engine and the boat propeller. In those cases the chance of mismatch is minimized because the dealer will combine only the compatible things.

It is always advisable to keep a propeller for spare. In case you donâ€™t have a proper idea regarding propeller it is important to ask a dealer and choose accordingly. In many cases the propeller needs to be changed when you change your rowing habit. Your engine is not ready to accept the changes and thus you need to prop it again so that it runs in proper way. In general, when the pitch is high the speed of the boat is high and Vis a Vis. It is always better if you are allowed to do some testing on the water and ten pay the money.
