Add to Loading Safety with Dock Buffers by Maria Gini

Article published on February 23rd 2012 | Business

Safety on the dock depends on the cleanliness levels you maintain. Your biggest aid for this would be dock buffers to ensure that people donâ€™t slip on slime or caked mud while transferring crates or other packages. They are ideal for hard surfaces and can be used on as diverse material as wood - even oak - granite, marble, VCT (vinyl composition tile), linoleum and ceramic tile. Buffers, even dock buffers, can be used on almost all types of flooring, whether it be in the lobby of a high rise office building, the loading bay for an industrial warehouse or the oak floor in your living room.

All you need is to make sure that you have all the necessary attachments for your dock buffers. Removing layers of built-up dirt or previous applications of flooring products like polish or paint can be accomplished in a far shorter amount of time and with considerably less effort with the use of dock buffers. Depending upon which model of dock buffer you use, rotating brushes or abrasive strips are required for heavy duty jobs. Since it can also be used to keep a loading bay squeaky clean, investing in a dock buffer always makes sense.

You can use loading bays for loading and unloading when thereâ€™s no alternative such as a service road or back gate. Use of the vehicle must be necessary, and it must be moved immediately after loading has finished. When sourcing loading bays you should look for manufacturers whose experience is extensive in design, development, prototyping and manufacture. Check out what kind of packaging will be used â€” returnable containers, single use cardboard boxes or according to your requirements.

You should also check out the payment options for the loading bay as well as the dock buffer â€“ whether you need to pay by cash or cheque or whether credit card payments are accepted. The most reliable manufacturers offer a range of delivery options. Where need be they will make to order or else deliver from stock on monthly or yearly schedules depending on the regularity of your requirement.
