Article published on December 16th 2011 | Business

Do you think you are safe at work? Have you ever thought of protecting you and your business premises? Well, the answer to these questions is yes, and it is simple. Security has become a major concern since the 9/11 incident. Most of us just go to work thinking whether we will come back alive or death. We are at constant pressure thinking about the safety of our family and dear ones.

We think of protecting our workplace too, as it gives us our bread and butter. Most of the small business entrepreneurs think of protecting their workplace that normally has valuable stock and assets. Even if you own a gas station or restaurant, security plays a very big role in terms of protection of people and valuables.

If you are a gas station owner, the fear of losing your business, not from competitors, but from hooligans and crazy maniacs who donâ€™t have the mind of their own grips you, especially if the station works round the clock. They could be a potential threat to you as they could injure or, worst case, kill your employees, steal materials or even burn down your gas station. You just canâ€™t think of what they are capable of. Everyone knows working in a gas station is a demanding job and also it is one of the riskiest places to be. It is just like working in a minefield, where at any moment an explosion could go off.

Disasters can happen at any time and the only solution is how to avert these disasters. A basic method could be to install an efficient and good security system. Needless to say, there are a lot of security service providers, but choosing the best and the optimum one is what we have to do. Security systems like video surveillance cameras can tell you what is happening all around your gas station. You could keep an eye on your employees, customers and even the passersby. Most security systems in the market are quite suitable to your basic needs like stopping employee theft, catch vandals, protect employees, stop shoplifting, view acts of violence etc.

You may sometimes feel the cash disappearing or shortage of cash in the cash register at the end of the day. Now like most owners or manager in a gas station, you cannot keep a constant watch on your employees. You cannot take any action unless you have got a valid proof or you may feel that the employee is one of the oldest and sincere ones. Now here is where you can use the service of the security cameras as you can constantly watch on your employees when they are handling the cash register.

Preventing shoplifting is another thing, which every gas station owner or an in-charge would think of. Most of the customers who come to your gas station are not the regular ones, so you may not know about their behavior. There are some people who are kleptomaniacs, where it is a kind of psychological disorder that unless they shoplift, they cannot sleep at night and there are others who live on it. Furthermore, even vandalism and acts of violence can be prevented by using a high-tech security system.

There was an incident that happened some five to six years ago, where a US marine had lost his life while buying food from a gas station. After coming from a late night party, the US marshal decided to buy some food and went to a nearby gas station. Unfortunately in the neighborhood, a fight broke out between two groups of teenagers because of a dispute at a bar. This fight reached till the gas station, where one of the teenagers took out his gun and shot the US marshal by mistake. The cops werenâ€™t able to make any arrest as the gas station did not have even a security camera. The family of the US marshal filed a legal suit against the gas station owner and the trial of this case is still going on. Had the gas station owner installed a security camera, the situation could have been

handled very differently and the family of the US marine would have gotten justice.

Currently, many security service providers are using advanced technology like ADT Security Services which has a unique feature called ADT Pulse, where the entire security of your business or office is connected to your mobile phone and PC. You can know what all is happening from you mobile and PC. So go ahead and choose from the various security providers that provide the best and unmatched security for you business and office.
