All about electronic cigarettes by [Eliot Allen](#)

Article published on November 30th 2011 | [Business](#)

The newly advertised Electronic Cigarettes are a great new way to promote healthy smoking. Although many smokers enjoy the sensation of inhaling cigarette smoke, the effects that the smoke is having on that persons body are detrimental to their health. Thats where the electronic cigarette comes in. This device can offer you the exact same feeling from both inhaling its vapour to the comfort of actually holding a cigarette. Inside an electrical cigarette lies an extremely clever piece of equipment called an atomizer. It is here that the cartridge gets heated up, warming the liquid, creating a vapour which will travel in and around the cigarette just like a normal cigarette. This allows the user to recreate the sensation of real smoke without causing harm to themselves or anybody that is around them.

As new laws have come about in to many countrys across the world regarding the use of cigarettes in public places, this electronic device does not fall into the same catergory as normal cigarettes, so the use of these are legal. When the cigarette is being used, the tip of the cigarette will light up, indicating that the atomizer is in sufficient working order. This light up tip also shows whether or not your cigarette needs to be charged. The process of charging your cigarette is also very easy. The battery end of the electric cigarette will attach onto a USB device which will fit into any USB slot on a computer, there is a light which will indicate when your cigarette is fully charged and ready to be used again. In regards to changing the filter, the smoke will simply become less and less, this is when you can think about adding a new filter to create suffucuent smoke again.

Choosing this healthier way towards smoking not only saves your health, but saves your bank balance as well. Cigarettes are so expensive these days that you can end up spending an absolute fortune every week. Yet the new electronic cigarette will cost you a one of price for the actual device, then the refills containing as many as 60 cigarettes, (depending on the amount you smoke) which costs less than a 20 deck of normal cigarettes. Both these reasons are more than enough to make you want to convert away from real cigarettes.

Since this new concept has come on to the market, the craze for them has increased incredibly. Once people see how much better this way of smoking can be for themselves and the people around them, no longer will other family members or friends need to passive smoke when they are around you. The vapour doesnt smell and does not linger like real smoke does. So no more smelly clothes plus fresh breath! Plus being able to use your electronic cigarette in any inclosed public place without breaking the law means that you will not offend anybody around you while you contain your smoking habit. If you decide that you would like to purchase one of these electronic cigarettes there are many different version ands makes to choose from, all harbouring the same effectiveness towrads smoking.
