Article published on January 24th 2012 | Business

composite lumber is the latest craze in the furniture industry. It gives you lots of options about choosing the picnic table that you intend to buy for your home. Also, it gives you a chance to save some money as the cost is less than traditional wood. It is also environment friendly. Most of the environmentalists are advising us about the use of this new brand of lumber. In the last few years, the popularity of the composite lumber has reached new heights and so are their uses for the reasons stated above. There is another variety of composite lumber that has gained prominence recently, known as the composite plastic lumber. The list of benefits obtained from these lumber are simply endless. At the same time, they are expensive than their parent varieties. It can easily withstand against the effects of wind, rain, heat etc and is highly long-lasting. It is widely used in various recreational, industrial and agricultural sectors..

Besides, being environment friendly, composite lumber is gaining its fame for other reasons too. The curse of deforestation is reduced. In this disquieting period of global warming, this gives us with ample help to preserve more trees. Also, the harvested woods often fell prey to insects or start to rot if not properly looked after. Thus insecticides or chemicals are used which makes it both costlier and harmful for us. Plastic is a great source of pollution. As the plastics are recycled in this process, environment and lives are saved to a great extent.

Earlier these plastics were used to be thrown to landfill resulting in polluting the space. But now-a â€“days, they are aptly processed and are designed into wonderful furniture. Composite Lumber can be given any shape, however difficult it may be.
