Article published on June 26th 2012 | Business

Cycle clothing is designed and produced to be comfortable functional and stylish whilst riding on your bike. There is a variety of cycle clothing available to suit all budgets, activity, durability and tastes. You can find cycle clothing for footwear, upper body, lower body and cycle clothing accessories. Footwear cycle clothing could include compression socks,

overshoes and cover shoes and cycling socks. Upper body cycle clothing could include bike shirts and tops, bike jerseys, jackets and vests and sports bras. Lower body cycle clothing could include MTB shorts, compression shorts and tights. Cycle clothing accessories could include beanies and balaclavas hats and caps. Cycle clothing compression socks are designed to support the calf, arch of the foot and ankle joint for reduced fatigue.

Cycle clothing socks could combine several features such as breathable for increased air circulation reducing excess moisture, cooling features designed to reduce fatigue and reserve energy by stabilising the leg and feet muscles and cooling them constantly through a thin fabric mesh under the feet which pushes sweat out of the inner layer and replaced with fresh air, compression technology and blister free protection that reduces pressure sore spots and blisters in main pressure points such as toes, Achilles tendon, instep, heels, balls of the feet, calf and ankle joints, water proof or weather repellent for rough cycling terrain and high quality cotton for a flexible and comfortable fit.

You may have different cycle clothing for different seasons as you may wish to wear thinner and shorter cycle clothing during the summer months whereas you may need to wear long sleeved or thermal cycle clothing during colder months.

Durance cycling such as cycling tours and competitive events may require advanced and professional cycle clothing for even more comfort and security cycle clothing features. The main feature of MTB shoes is the ability to grip any MTB pedal. Additional features could include carbon soles, prevents slipping during hill climbs and enhanced grip in wet and muddy conditions.
