Heating Swimming Pool Water with Pool Heater by Nishaidhijames

Article published on July 10th 2012 | Business

Warming up the pool water with the use of solar pool heater is the right way of reducing energy bill and also maintaining the water warm for a comfortable swimming even during winter season. The best part is it is quite easy to install the heater under any circumstance. However, the job ought to be done by professionals so that the installation procedure is done rightly.

The winter months are always cold, especially during early morning and late evenings. This is the right time to make use of the pool heater. The process derives heat energy from sun to ensure that the water you use is absolutely at right temperature under all condition.

In the old days, gas heater or electric heater were used to reach warmth to the water. However, remember that the system will vary from one pool to the other depending upon its design. Creating a comfortable temperature is comparatively low than the temperature maintained in bath and showers.

Opt for flat panel solar collectors that are efficient and maintained at a low temperature and are also perfectly suited for the pool water. This is to create an ambient temperature so that you enjoy a lovely swim at the background of your house.

The water actually passes through the solar panel of the pool heaters to ensure that optimum temperature is maintained under all conditions. The system consists of pump, tubing and filter. Water is circulated through the flat panel usually mounted next to the swimming pool. There is an optional filter that helps to suck out dirt or debris and maintain a balanced temperature under all conditions.

The actual size of solar collector depends upon size, geographical location, shape of pool and also the time required to heat the pool. Thus, now you know about the heating process of pool heaters. Click here for more information.
