Hose Couplings - How to Select the Best One by [Julia Roger](#)

Article published on March 19th 2012 | [Business](#)

Hose Pipes are well known for transporting liquid material from one place to another. They have enormous use in each and every domain of life. These hose couplings are having different types, shapes and sizes. These pipes are made of different types of materials that suit the applications of the desired specific needs. In olden days these pipes were made from Rubber and its components which were bulky and due to this reason transportation of such pipes was a tough job.

They cannot be moved from one place to another easily. These rubber pipes were damaged easily and it was a difficult job to repair them. The chemical hosepipes are well known for the purpose of its durability and strength that they possess. The modern days Hose pipes are made of poly Vinyl Chloride material and are used almost throughout the world due to its quality and special features. The PVC tubing is made of virgin grade PVC and includes all the types of flexible pipes. There are hose pipes of different qualities and range as well.

A wide range of products are being manufactured these days that has different sizes and shapes. There are many types of hose pipes that are manufactured for the wide variety of uses. These Hose pipes that are for pneumatic use are nylon reinforced hoses in which yarn of nylon material is fused between inner and outer layers of pipes. They provide high resistance that can withstand high pressure without the chance of splitting. These pipes are resistant to chemicals and other corrosive materials. These Chemical Hose pipes are well known for the transport of chemicals and other organic materials. The water hose pipes are used mainly for the purpose of gardening, construction and irrigation purposes. There are welding hoses that joins the welding machine with the welding electrodes and carries gas for the purpose of welding and cutting the equipments.

There are car washing Hoses that are used for the purpose of washing cars in garages. It increases the pressure of water. Some of the other types of pipes also include sanitary connection hose pipes. These are made of nylon material and are used for bathroom fittings and connections.
