Learning to Trade in Silver Futures by [Eliza Deven]

Article published on June 27th 2012 | [Business]

Though silver has various industrial uses, it is also used purely as an investment like gold. Silver prices, like those of any other commodity, are driven by speculation, as well as supply and demand. Silver prices are much more volatile than gold prices, primarily because of lower market liquidity and demand fluctuations. These prices, however, often track the gold price due to store of value demand.

Investors can gain exposure to silver in a number of ways. Exchange Traded Funds based on silver prices are one of the most popular ways to gain exposure to silver. Investing in shares of silver mining companies is also another option. Trading in silver futures is another way to play the silver market.

Silver futures are traded on the Comex division of the New York Mercantile Exchange (NYMEX). Comex futures for silver are traded under the ticker symbol SI and in U.S. cents per troy ounce. These futures on the Comex division of NYMEX are delivered every month of the year. The size of a contract on the Comex is 5,000 troy ounces.

At Barchart, traders can view up to date information about these and other futures. Traders can use the Most Active Futures page available on Barchart to get information about futures. The Most Active Futures page includes the list of commodity contracts with the greatest volume for the day. The page is updated with every refresh.

The Most Active Futures Page on Barchart includes three standard views, which include the main view, technical view, and performance view. To get more information about the futures market for silver, traders can also use the Futures Momentum page on Barchart. The Futures Momentum page includes the list of the strongest futures contracts, which are ranked by weighted alpha over the past year.

Traders can also track the performance of silver futures with the help of the Performance Leaders page on Barchart. Barchartâ€™s Performance Leaders page includes commodities contracts with the highest and lowest percent change. The page helps investors determine the commodities with the most price movement from the close of the market the previous day.

There are also other online resources that traders can use to receive dependable and accurate information about silver prices and futures. Bloomberg is a reliable resource online to track futures. Traders can also track futures on the website of the New York Mercantile Exchange.
