Masking Products â€“ Variety and Value

by Quinn White

Article published on May 25th 2012 | Business

Industrial products are always about precision and productivity in tough conditions. Industrial manufacturing has a lot to do with the ability to come up with solutions on time without giving in to the stress and strain of manufacturing. When there are high risks of injury and damages to products, when there are many chances of miscalculations and unwanted exposures, it is important to ensure that there are options available that would put them all together and ensure that there is sufficient protection from the unwanted elements. Masking products are aimed at providing the kind of environment that would make the most of the production establishment to provide quality products free from damages or wastages. And fortunately, there is a long list of masking products to suit different industries and various applications, ensuring that there is no business that is left unprotected and there is no product that is left in the lurch, exposed to dangers in production, storage and distribution.

Masking products range from stretch fit cover caps that are made of polyethylene, designed to cover wide areas and various shapes with just one product. The main purpose of this kind of masking products is to ensure that the industrial products are protected from dirt and moisture during the production and distribution process. And good thing about stretch fit cover caps is that they are reusable after first use. Another kind of masking products that are widely used when it comes to low temperature liquids as well as powder coatings are high temperature Crepe masking tapes. They are thick masking tapes that are pressure sensitive and are capable of being applied or removed easily. The self bonding silicone masking tapes are special in that these masking products do not require adhesives, can provide waterproof seal after a period of 24 hours of self-bonding cure, and display excellent electric properties â€“ they come in handy in high temperature cures.

There are other kinds of masking products such as the Polyimide Insulation Masking Tapes and Glass Cloth (Fibre Glass) Masking Tapes â€“ the latter are easy to remove without fraying and provide high degrees of resistance against flame, abrasion and exposure to solvents. They are good for use on irregular shapes and surfaces as well as corners. All these masking products, along with green polyester masking tapes and a range of masking disks such as the green polyester masking disks, Polyimide Insulation Masking Disks and High Temperature Crepe Masking Disks provide for a comprehensive range of solutions for industrial problems.
