Article published on February 3rd 2012 | Business

MyCorp, a small business based in Texas, is a distributor of manufacturing equipment for a major facility, OmniCorp. Accordingly, a forest trust exists between MyCorp and Omni- Corp, which allows MyCorp to access OmniCorp?s resources. However, MCITP Administrator OmniCorp has requested as part of the partnership that it have full administrative control over MyCorp, and therefore it services all help desk and administrative tickets that are passed up from MyCorp. Today, OmniCorp has asked MyCorp to see whether it could reduce the amount of requests it receives regarding simple driver installation. What should you do?

Implement a Group Policy object that gives local users administrative control over their various machines for local driver installation.

Promote users to administrators on their local machines. Upgrade the facility to Windows Server 2008 and Windows Vista. Implement a Group Policy object that prompts for administrative credentials at driver installation and then evaluates each on a per-case basis. What permissions are required in order to process a security principal in a container linked to the GPO? (Choose all that apply.)

Allow Read

Allow Read and Write

Allow Apply Group Policy

Allow Edit Group Policy

Allow Create Group Policy Objects

What set of individual GPO settings MCITP: Server Administrator are required in order to allow a user to read, write, create, and delete child objects? According to the best practices outlined by Microsoft, a WSUS update policy shouldn?t be deployed at all but which of the following?

You are working in an organization with more than 20 users that currently has more than 40 different applications deployed through GPOs. The organization has three sites, Site1, Site2, and Site3. Within each site, users need to access a different set of mapped network shares. How can you make sure your users have access to the proper shared folders without disrupting the current environment?
