Mobility Vans: Viable Solutions for Persons with Disabilities

by Thomas Wright

Article published on February 16th 2012 | Business

Traveling with a loved one in a scooter or wheelchair can be quite challenging without a suitable vehicle. Getting inside a sedan or a sport utility vehicle without a ramp is difficult enough, especially for persons with limited mobility; stowing the scooter or wheelchair can be even more complicated. Fortunately, thanks to handicapped accessible vehicles, transporting people in scooters and wheelchairs is a breeze.

Handicapped accessible vehicles are available as full sized types as well as minivans. They also come with a variety of features, options, and prices. With a little research and knowhow, itâ€™s easy to find out what type of handicapped accessible vehicle is best for your handicapped family member, whether they use a scooter or a wheelchair.

Full sized handicapped accessible vehicles are convenient for larger families with scooter or wheelchair users who are quite taller or wider than average. Since these vehicles are bigger than sedans and most sports utility vehicles, drivers should practice safe driving habits and ideally should have prior experience maneuvering and parking large vehicles to avoid any accidents. Mobility minivans, on the other hand, are quite easier to drive, as they are normally as big as most family-sized minivans.

Although a lot of individuals may feel that some handicapped accessible vehicles can be a bit small, several derivatives provide ample room. For example, single or double jump seats offer more seating space for wheelchair users. Most minivan-sized handicapped accessible vehicles often have enough space for two scooters or wheelchair using people and still have room for extra cargo. In addition, minivan sized handicapped accessible vans tend to use less gasoline.

For families with loved ones who use a scooter or a wheelchair, acquiring the right kind of mobility van brings immediate advantages. These vehicles do away with the inconvenience of traveling with a scooter or wheelchair in tow. In addition, they can make ingress and egress more secure and more expedient for persons with disabilities. Whether you prefer a full sized handicapped accessible vehicle or something smaller, you will be doing PWDs and everyone else a huge favor.

These days, you donâ€™t have to feel sorry about leaving PWDs at home simply because you canâ€™t bring them along all the way to your intended destination due to lack of storage space for their scooter or wheelchair. With spacious mobility vans, travelling is much safer and easier. Nothing says â€œI love youâ€• quite like spending quality time with the people who matter to you the most.
