Plastic as a Material for Garden Posts: what Drives their Value? by [Randy James](#)

Article published on July 5th 2012 | [Business](#)

Vinyl or PVC fences, also often referred to as plastic garden posts, have provided people with a brand new approach to fencing. Durable and long lasting, these items have far outshone their counterparts in wood. Being durable, these plastic poles, it goes without saying, can manage and tolerate different weather situations. Apart from being weather proof, they are also resistant to different kinds of animal infestations. As we all know, wood is a material that makes for visual charm but does not offer effective resistance against wear and tear. This could be considered as a major reason why more and more people are switching loyalties from wood to plastic.

There is hardly any dearth of plastic garden posts available in the market today. Plastic as a material for fencing has become so popular that it is now being used everywhere right from crowd control posts to crowd control stanchions. However, that is not to imply that plastic materials come with zero defects.. The most important or pressing concern with these materials is that they start fading way ahead of the scheduled time. However, the good news here is, with the advancement of technology, these problems are fast melting into oblivion. As discussed already, when it comes variety, you will have a host of options. In our opinion, the black fence posts are worth trying out.

You may now ask why choose plastic garden posts when in reality there is the option of concrete posts available? In fact, concrete is known to feature all the primary advantages of plastic as described above. In that case, let us explain why plastic as material scores over concrete. In the first place, it is weather resistant. Irrespective of the degree and magnitude of climatic fluctuations, these materials will not give in easily. Secondly, plastic is known to be more cost effective than either wood or metal or concrete. In the current economic scenario, therefore, it makes sense to choose plastic above the other materials mentioned here. Last but not the least plastic requires little or no maintenance. Therefore, it can serve you for ages without any hassles whatsoever.
