Security guard tour system: electrical guard for your safety by Gaurdtour

Article published on May 29th 2012 | Business

Have you ever heard about security guard tour systems? There are number of companies which are supplying quality patrol systems to their clients in order to keep a close look on security guards on duty. Such types of systems are known as guard tour systems and can be utilized for guards at different locations and posts.

Here we are going to briefly discuss about security guard tour systems. These systems are small sized electronic device which can be placed on walls, underwater or in certain objects and mainly designed for improving the work quality of all security guards as well as patrol officers. But it doesnâ€™t means that it helps in decreasing issues of theft and burglary at different sectors. If you want to setup tour system, firstly you have to install software and other built-in features required for it with the help of facility management solution providers.

It is basically divided into three components-Scanner, incident booklet, and RFID. All these components of the system have their own importance and are described below:

Scanner

It is effectively used to search all weaknesses regarding security plus scans entire situations as well as all activities of security guards. After that, this type of scanned data is sent to computer with full details such as time, location and incidents and also stored in either printed form or digital form.

Incident booklet

It is just like a notepad which is assigned to all on duty officers. These officers mention all the things which are wrong or incorrect according to conditions and policies. In fact, it is a primitive way to monitor areas assigned to on-duty officers.

RFID

It stands for radio-frequency identification chips. Due to these chips, systems can be used in the discrete locations and also works over there when it is hidden from sight.

At last, security guard tour systems are required to keep track of all activities and record the process of patrolling at every location and post. Then every post is enclosed by booklet, scanner, RFID that assists in analysis or evaluation of their duty. In overall, an officer use scanner to scan a particular event, then record it in booklet & after that reproduction is assisted by RFID. It has become essential part for all the business who wants to ensure that their security staff is carrying out their roles effectively.
