Article published on May 18th 2012 | Business

After having a rough day and existence in un-clean air filled with dust and dirt, you need to come back home and breathe in fresh oxygen. air filter ensures that the air that you breathe is not only breathable but also clean. There are some important facts that you need to know to keep the air cleanest to breathe in easier and keep your respiratory system free from allergens.

It is a common practice for most of the air filter companies to put a five-year warranty with the air filters. However, it is normal for such a system to function for five years at a stretch. However, it is best to check the system properly in the first couple of years of its functioning.

The truth is that a filter functions properly for a maximum of two or three years. However, you can actually make them last for almost three years without faltering if a pre-filter is used with it. During the functioning process, the filter will let dust or allergens to pass through properly.

You can save a great deal of money by cleaning the air filters at timely intervals. Remember, when the filter is filled with dirt, this actually forces the fan to run hotter and harder so as to push the air inside the filter and the whole process eventually forces the filter to use much of power. Hence, a dust filled filter is directly related to too much of power usage.

It is important for discerning customers to go check the market and select the air filter that will be suitable for their house and for their breathing. Thus, it is important to ensure that the right filter is picked from the market after going through the feedback. Once you learn the important facts about air filters, it will help you select the right one that have a good warranty period and serves you rightly for a long period.
