Twin Agent Fire-Fighting Units are Effective by [Julia Roger](#)

Article published on July 3rd 2012 | [Business](#)

Twin agent units have proved to be very effective. It has a compact skid mounting design and is totally self-contained making it a perfect field replacement item. Different kinds of fire hazards use different type of AFFF, dry chemical or clean agents.

Aqueous Film Forming Form or AFFF and fast flame knock down are combined by twin agent fire fighting agents to secure fire area. The earlier such a securing effort takes, lesser are chances of damages to human life and properties. Fire and safety regulatory authorities categorize areas according to nature of fire hazards it is prone to. Industrial areas that come within criteria of High Class B hazards, is the location where such units are mostly used.

While twin agent helps in knocking down a fire rapidly while the foam goes to secure hazards. It lays a type of vapor suppressing blanket. Instances of gas fires generally witness application of foam to extinguish fire around cool heated and blowout metals. It has nozzles which are connecting to twin hose lines.

There are many locations producing flammable liquids when use of twin agent systems serves very beneficial. They are custom designed to suit customer specifications. They have unique application features prompting many to customize according to their requirement. Different government agencies prefer these systems because of its durability, support quality and value.

To facilitate ease and comfort in using these systems, tanks are mounted. This is done either in horizontal or vertical layouts. The selection of category of mounting will depend on issues such as centre of gravity. They are designed in a manner to find suitability with rescue vehicle beds. These systems are preferred because they are always ready to discharge immediately. This is in sharp contrast to other fire fighting devices that require some waiting time to initialize pressure reaction. A lot of commercial units prefer to place such fire extinguishing devices in their premises. For, they do not want to take chances of loss to human life and properties.
