Article published on April 5th 2012 | Business

Aftermarket Services generally refers to the management of returns, repair, refurbishment, recovery and recycling.

High end after market Services can also mean providing critical feedback of data amongst the supply chain constituents, delivering continuous improvements for both existing and new generation products and unlocking efficiencies previously not identified.

Aftermarket Services include the following:

â€º Return Logistics

â€º Like Unit Repair

â€º Recovery, Recycling and eWaste

â€º Exchange Fulfillment

â€º Same Unit Repair

Why Use Aftermarket Services?

Availing of Aftermarket Services means securing additional profit by maintaining the maximum asset value retention of your products throughout their product life cycle while simultaneously minimizing non-value repair, inventory levels and unnecessary touches in the supply chain.
