If you are all set for making a career in CCIE Certification which is normally the acronym of Cisco Certified Internet Expert, you have to gather important information regarding the steps to be taken while pursuing a career in the world of networking. There are various certifications of Cisco such as CCNP, CCNA and other courses as well. But among all these courses offered by Cisco System, the Certification of CCIE is considered to be the highest accreditation.

Through this certification the experts of internet workings get scrutinized getting validated through the certification. The certification is highly popular in terms of career prospects and when pursued usually provides high returns in terms of money, fame and satisfaction as well. In a survey it has been found that there are only around 15000 holders of CCIE Certification in the entire world. It suggests this course is quite challenging and tough as well but once cleared one can expect satisfying returns. In order to tackle the challenging nature of the certification one needs to provide commitment in time, money as well as energy. Only then one can come out with flying colors.

One should take note that although this certification would avail you a lot of job opportunities but at the same time it is also equally tough to obtain the CCIE Certification as one has to give exams conducted by Cisco System. Basically there are two exams comprising of written test as well as lab exam which are compulsory to clear prior to obtaining of certification.

However during the course, there are various CCIE Trainings that are important for the practical aspects of the certification. Those practical trainings expose students to different situations where they learn skills that are required to perform the functions of the responsible Cisco Certified Internet Expert once they enter into the industry. Talking about the written examination, it is comprised of hundred questions and wholly based on computer lasting for two hours. This written exam is quite significant on the part that certain minimum pass mark of this exam is necessary for getting access into the lab exam.

Most of the students usually wonder about the fees required for sitting in the written examination but the overall exam fees would cost you around 350 USD. Due to the presence of local taxes accompanied by exchange rates, there would be a slight increase of the fees. Anyone who is ready to take the exam again has to wait for five days lying between the attempts made. On passing the exam candidates are not allowed to sit for 6 months at this particular exam.

In addition, it is compulsory on the part of the candidates that they have to appear for the important lab exam within the duration of 18 months counting from the passing date of written exam. And once you fail in the lab exam, then you have to apply for the re-test again within under the 12 months otherwise your written exam would not be considered valid at all. Moreover, if one fails to apply for the re-test under the 12 months duration or even fails to pass in the lab exam within the three years duration then this would lead to the expiry of written test and the candidates ultimately have to pass both the exams.

You have to pay around 1400 USD for the lab exams and you will take the exam for 8 hours. The importance of this exam is it usually validates the ability or acquired skills of configuring as well as troubleshooting the software followed by equipments through attending CCIE Training on the part of candidates.
