Acer has seen an era of computing, and in the course of globalization and surging competencies it has emerged as a strong entity. Nowadays, in terms of global market share it ranks No. 2 for total PCs and notebooks. With the acquisition of Gateway, Packard Bell, and eMachines brands it has proved the entrepreneurship potency it holds at its core. Acer notebooks, netbooks, chromebooks, tablets, desktops, monitors, servers, storage devices are known worldwide for their performance and stability.

Acer Support is dedicated to make your experience with the product go longer and smooth. The brand is focused on 24-hours a day service, and no issue is big now! You can avail support through phone, e-mail or chat as per circumstances. You can also find software and driver download section from where you can download software of your choice. The Acer Help service is categorized as: Install, upgrade, and activate; performance and maintenance; security and privacy; networking, e-mail, system repair and maintenance, and so on.

Additionally, the portal offers support for peripherals, routers and other network components. However, at the time of support you may need to furnish some details like part number, product model, warranty expiry date, purchase date and more to the support technicians. You may also take help from troubleshooting videos and knowledgebase with no cost.

Acer help-desk is available 24/7 to provide on-demand tech support but being a user should also know some Know-How to fix frequent issues related to performance, Internet connectivity, e-mail send/receive, printer settings and more. Most of the Acer desktop or laptop problems are related to the Windows operating system, Microsoft Office, Internet Explorer, Microsoft Hotmail, Outlook, Intuit, security and privacy. As you know well that software update and configuration are the key of smart performance, and it can be achieved with no effort but is priceless. You can fix Windows related issues running the Performance troubleshooter. It instantly checks issues that might slow down your computer's performance, such as how many users are currently logged on to the computer and whether multiple programs are running at the same time. Access it as :

Click the "Start" button , and then click "Control Panel". In the "search" box, type "troubleshooting" then click "Troubleshooting". Under "System and Security", click "Check for performance issues" you will find the wizard working like an ace.

If your Acer machine runs on Windows 7, then forget all! Just navigate to the Action Center as: "Start", followed by "Control Panel", and then, under "System and Security" you get "Review your computer's status". It presents entire problem detail under "Security or Maintenance" section. You can click on the error and let the tool to fix it instantly.

You can give extra edge to your Acer machine in terms of performance. You can disable non-essential features, such as UAC (User account control), Aero, Windows 7 Sidebar, Aero Peek, Windows 7 Password Protection, unwanted system sounds, and disable unwanted Start Up Items, etc. if you are a real performance freak. Disk Cleanup and Defragmenter are the right accomplice if you want to keep hard-disk errors at a bay in an easy and instant way.

Thus, you have seen that instead of dialing Acer number every time, you can take charge of your machine and fix issues on your own.
