Benefits of IT Support for Business Management by [Shania Simpsons](#)

Article published on May 16th 2012 | [Computer](#)

Computer systems have become so essential that almost every company and institution needs it. These institutions “ schools, hotel and fast food chains, accountancy and government offices ” all require information technology (IT) support. In fact, even private individuals who own computers need IT know-how to discern which software and anti-virus programs should be installed to prevent computer corruption.

Modern life has become largely dependent on computers. That is why keeping these devices running smoothly and optimally is a must. Fortunately, this task is done by IT experts and support teams, which offer the latest in computer technology and services. Listed here are some advantages individuals and companies can have when they choose to acquire IT services.

Software support

Computer programs tend to become outdated every time large computer companies develop newer versions of these programs. According to the authors of the book Computer and Network Procedures to Manage IT Systems, getting IT support is beneficial since it helps companies acquire latest software and program updates. Moreover, IT experts can also advise companies on which anti-virus to get and the cost-benefit of choosing new software.

Licensing

One of the best advantages of getting IT support Portland Oregon residents recommend is authenticating software use. The request for licensing may need to be approved by the manager first. Next, an individual can check the software registry and see how many licenses are available. If licenses are available, the license can be allocated to the company or individual who requested it. Conversely, if licenses are not available, IT personnel or the company could request for additional licenses from the vendor. Once the vendor approves the company’s licensing request, the software can now be acquired in bulk for deployment to multiple PCs the company uses in its operations.

Hardware support

IT support is not only concerned with computer programs but with the PC’s physical features as well. Hardware pertains to any physical components of a computer, which include the central processing unit, the disc drive, and the monitor, to name a few. IT support Portland residents trust provide assistance in identifying or repairing damaged computer parts. Moreover, Portland IT experts also install higher memory in PCs to accommodate the rapid accumulation of files. Hardware support also includes maintenance of computer accessories like printers and scanners.

Prevention of cybercrime

IT support Portland OR residents prefer can also help prevent cybercrime which include any kind of fraud or hacking committed in a computer system. IT professionals can add stiffer protection to company computers by putting passwords or data encrypting systems in them.
