Go Easy with PC, Laptop and Printer Troubleshooting by [Jack K Wilson](#)

Article published on February 13th 2012 | [Computer](#)

Presence of HP can be felt in all domains of computing and printing. HP computers, laptops, all-in-ones, and printers are globally used under home and business ambit. However, in the flexible and globalized market where new competitors are emerging every day, your focus should be to procure maximum at the least investment. Being a new buyer access your HP products on the basis of speed, features, design and form factor, battery life (excluding desktop), display quality, durability, portability, expandability and more. Collecting more information from reputed sites such as PCMag, PC Advisor, and others can help you a lot.

However, there is another aspect on which the success of an HP product depends, and i.e. HP Customer Service. Instant, easy-to-access, and effective service ensures that nothing can come between you and your computing. Expertsâ€™ services are available for computer setup and installation, software and hardware configuration, Internet, e-mail, browser, and firewall settings, virus and spyware removal and more. Estimating the success of HP products third-party service providers have also leaped to gobble on the advantage.

HP Support, powered by the industriesâ€™ best remote technology and administered by experienced experts is obviously the right place to address all issues. But always leaning towards is not the right job. The practice of home PC repair and maintenance can be a good idea to beat the blue. You can address issues associated with the performance, Internet connectivity, damaged system files, viruses and spyware and more on your own. Meanwhile, if you are confronting problems goggle on the knowledgebase. You will find the habit extremely helpful. Self-belief is the must asset when you go for HP PC or printer troubleshooting.

For performance related issues, the best is to go with the built-in Windows Tools like Disc Cleanup, Disc Defragmenter, MSConfig and Windows Task Manager and more. Analyze the Windows Registry Settings if you are damn sure that you know how to get out of it, and donâ€™t amiss to have a backup of it so as to rewind from any unpleasant situation. Windows Event Viewer is just like the barometer; go through its reading under various logs related to applications and Windows components. You can access the viewer via the Control Panel or through the Run command with the text `eventvwr.msc`, click the 'Event Viewer' link and it will pop up in a second or two.

If you are able to interpret its results and correlate those with the existing symptoms than probably you are the best technician. HP technical help solution and video tutorials available with the portal will ease your task. Understanding virus and spyware symptoms is pretty helpful in handling awkward situation. Donâ€™t ignore symptoms or errors which are frequent but get resolved on system restart. Understand the language of the HP machine, and visualize its error messages that try to convey some information regarding any forthcoming problems. Possibly going with Windows Update and Action Center will help you to stay away from issues which stem up due to incompatibility and conflicts. Both bring important notifications regarding important software or hardware update or vulnerabilities to let you act smart.
