Windows password is primarily used for security purpose. Mostly banks and other large companies use windows password. So that nobody can hack or steal their data. Because of this reason, administration has to put a password over the window. So we can say that the password will increase the level of security of your data in the computer. If your data is not password protected, then everyone can steal personal information when you are not around.

It is extremely easy to put a password on window. You have to click on the steps then he can recover Windows password on computer. User just has to click on the start button on go the control panel. By clicking on this option, he can easily put any password on the window. Here, a complete password setting options are available for its user.

Recovery of forgotten window password!

If a person forgot Windows 7 password, then he has no need to worry about the forgotten password.

There are many windows password recovery techniques which are helpful in password recovery. User can recover lost password from instant password finder program. It is an independent executable small program. There is no need to install this program. Even user can run it from the floppy disk. This program will independently check the system for possible passwords and show the password within few second over the screen.

1. Use another accounts with administrator rights

If there is still another user account which you remember has administrative privileges, you can opt it for Windows XP password recovery.

Restart system and boot the system into Safe Mode. Click on the icon for the administrators account at the Account Log on Screen. Once system has booted to the desktop, you reset password with following steps.

Start -> Control Panel -> Administrative Tools -> Computer Management.

>folder Users.

Right click the account user name which password was lost, then click Set Password.

Reset password - keep New Password and Confirm Password blank.

After finished, restart PC and login.

2. Logon with the built-in Administrator account

In Safe Mode (press F8 when PC starts), you can logon with the built-in Administrator user account for your lost Windows 7 password reset with this account if you didn't change its password or can access it.

3. Use Ophcrack

Ophcrack is a free Windows password cracker that cracks Windows passwords by using LM hashes through rainbow tables. It is a very efficient implementation of rainbow tables done by the inventors of the method. It comes with a Graphical User Interface and runs on multiple platforms. Please note that passwords greater than 14 characters cannot be cracked.
