Ruby on Rails – the Emerging Programming Framework [Kandhoire](#)

Article published on February 28th 2012 | [Computer](#)

We often find the task of programming very difficult. The whole process of scheming, designing, writing, debugging, testing and maintaining the source codes of various computer programs is basically termed as programming. We are all aware of the programming language called java; ruby is essentially a programming language. It may not be so popular right now, but it is as old as java and is an object-oriented scripting language. It aims at uniting various rewards and advantages of more or less every single one of the scripting languages present over the globe today. The verbal communication in which ruby is written is C programming language, which has fundamental ability similar to Perl and Python.

Ruby on Rails is typically a web development framework designed by the ruby programming language team. It was designed by David Heinemeier Hansson in the year 2003. TIOBE programming community regards Ruby on Rails as one of the top programming languages. The web host is furthermore supported by an extremely wide ecosystem. It also has about 1,800 contributors. Although other editors developed in the past are still doing very well, the most preferred editor of the RoR is text mate on OS X. If you are a not a programmer, but have little knowledge in programming then RoR is the most convenient thing for you. Credit to RoR, the barriers for entry into programming has been lowered. Powerful web application which earlier took weeks to develop, sometimes even months, can now be done in a matter of days. This is one of the primary reasons why ROR is being used by people around the globe these days. Not to mention that ROR has been used for tens of thousands of applications and some of the prolific ones are Twitter, Basecamp, Groupon, Shopify, Zendesk and many more.

The services which are usually offered on this programming language are strategy planning and new development of web programs, project rescue, engineering related to Rails, Rails project maintenance, etc. Performance monitoring is one of the most amazing features of Rails. RoR is loaded with start-ups, which makes things easier for the programmer. The programmer can check his application progress from time to time because of this feature. Scout and New Relic are some of the superior applications. RoR is now well known for providing consistent, unswerving and dependable web hosting to its programmers. For a programmer his target market is the most important thing. Since RoR focuses more on the framework, as an alternative to focusing on the tools, it helps the programmers to develop more new ideas and ultimately create applications which will hit their target market more.

We are a passionate team of Ruby on Rails development and over the years have gained the technical, strategic and creative expertise to ensure your Ruby on Rails web project is a success. We offer the full range of rails consultancy services to everybody from startups to enterprises and our mature process can surely help you find superior solutions to your rails projects. For more details about RoR visit us website.
