Rugged Computers- Take them out! by [James](#)

Article published on February 24th 2012 | [Computer](#)

Laptops have been instrumental in improving business productivity; however, companies face heavy repair bills and hence need to switch to heavy-duty rugged computers. The rugged computers are built to endure unusual circumstances, with high-grade plastic and metal construction and dozens of specialized features to protect the computer from liquids, sand, dirt as well as human errors like accidental drops and hits. These devices are vital for computing while traveling or outdoors.

Due to their robust built and specialized features such as hard drive shock mounts, liquid-resistant keyboards, rugged computers are much more costly than standard laptops. They usually cost about three to four times what a standard computer with same specifications would cost, depending on the manufacturer, the features along with a number of other aspects.

While they are more costly than other laptops, companies can simply justify their costs. There is less expenses on repairs and replacements than normal laptops, particularly when they are used during travel. . In some situations, a rugged computer will work where a regular computer will approximately at once fail.

A lot of rugged PCs in addition have high-end features which permit for easier Internet access like 3G and Edge network capabilities. This can mean superior productivity and faster job completion for workers who require communicating with a home office through an Internet connection. These are only some of the benefits.

The data-protecting features of a high-end rugged computer can, in addition, save a company thousands of dollars over the lifespan of the computer. By preventing hard drives from taking physical shock damage, rugged laptop computers considerably lower the possibilities of a hard drive failure. Hard drive failure is expensive, as professional data recovery, services can frequently cost thousands of dollars and the lost data can be worth even more.
