Run your Scratched Disc with JFJ Easy Pro by [James Blee](#)

Article published on April 17th 2012 | [Computer](#)

Get rid of all the problems related to scratched disc or skipping disc. Even the minute or deep scratches and gauges can easily be cured in minutes with jfj easy pro. This all in one step cleaner is meant to repair discs of every kind be it Music CDs, CD ROMs, Play station, DVD, VCD, CDR, DVDR, HD DVD and other compact disc based products. Now every time your player or system stops playing the disc you do not need to change your player or buy a new disc as with this system you can easily convert your old scratched disc into a brand new one.

This machine is easy to install and can be operated following a step by step guide provided with it. It cleans the discs in a special manner so that only the scratches and gauges are removed safely. The bottom of the CD is merely a protective plastic or polycarbonate, holds no actual information hence a scratch on the polycarbonate results in the skipping or pausing of the CD, and makes it difficult for the reader lens from properly reading onto the information stored therein. By grinding and polishing the damaged layers of the protective plastic the CD reader lens can easily read the information.

Applying the Easy Pro solution and cleaning the excess residue off would remove the finger prints, dust and skipping from the disc. It is suggested to pick up the CD from the edge therefore before placing a new disc on the arm. It is advisable to clean any solution from the plate that would prevent the disc from proper alignment. In case the solution becomes watery do not use it or shake it as it won't return to its original state therefore immediately contact the manufacturer. As the sanding and buffing pads do not require any cleaning, hence do not wash them.

Risk free and revolutionary this machine uses the three step process to solve even the medium and deep scratches. If you're tired of buying discs or getting your system repaired then this machine proves to be the best solution. Try this machine and give your disc a new look.
