Air conditioning become significant by [Sudhanshusnv](#)

Article published on August 3rd 2012 | [Customer Service](#)

A way of regulating the temperature, humidity, cleanliness and air flow inside room or building is Air Conditioning. The process is completely mechanical. Temperature-humidity ratio is controlled at such a level that is comfortable and healthful. Air conditioner controls this ratio. Presently, most air conditioners come with a feature to clean circulating air of various contaminants such as dust, pollen or soot etc. It will not be wrong is said that air conditioning is cleaning air considerably. In modern time and techniques air conditioner has become more than just a cooling device. There is a mechanical technique of reversing refrigeration cycle. No matter how cold or hot outside, people get comfortable and favorable atmosphere inside room or building where air conditioner has been installed.
