Samsung has integrated a touch screen solution within the LCD screens. Today, Samsung LCD plus transparent screen display is one of the fastest selling element on the market. Plus, the enhanced sensitivity of touch screen makes Samsung transparent LCD more easier to operate. Samsung touch display screen technology attracts an audience and show more and more features in the transparent display screens. These transparent display screen offer various features like social media, multi- touch capability, day/night capable display, switchable blacklighting and more. You can also use it as your computer and access internet as well as TV also, to view pictures, videos and your favorite channels.

Samsung LCD plus touch display screens use ambient light during the day and then can switch over to a more traditional black background as a night time mode. Samsung LCD plus touch display acts as fully functional complete package where you can access wide range of apps including Twitter, Microsoft office, Facebook, Whatsapp, maps, flights info, music, videos and many more. With this you can surf any website you want access. Samsung TV screen have a thin layer of organic material that glows, creating the screen's backlighting. This type of screen require less power consumption, provides various colors and faster than normal LCD screens.

Samsung Transparent display is known as for its touch screen features and its attractive transparent design technology. These LCD screens consume less electricity and offer high color accuracy and graphics. It offers text display, connectivity, adjust-ability and video/image quality. Samsung has provides a lot of advanced networking capabilities and enhanced connectivity features on their transparent LCD's and these features make the Samsung 42 inch and 22 inch transparent display screen a wonderful entertainment hub whether at home or anywhere. These display acts as two way mirror where you can see out but not the other way around. Samsung has included various new and unique touch features. Like blinds feature, where you can open and close virtual blinds by swipe of your finger.

Samsung leads the global LCD market with the world's first mass produced transparent display product. Transparent displays have a wide range of use in all industry areas as an efficient tool for delivering information and communication. The transparent LCD panels have a high transmittance rate, which enables a person to look right through the panel like glass, and it consumes 90% less electricity compared with a conventional LCD panel using back light unit. Samsung smart window is a cool concept with multiple unique features like multi touch screen, ultra thin design, powerful customer engagement, multiple colors, etc. Samsung is the most recognizable brand in the electronics sector and offer best quality products. If you are interested to buy Samsung LCD plus touch screen feature, then you can search online and order these screens through internet. Companies are available online who builds and sell these products to their consumers.
