Recover Your Windows After Crash by Willam Scot

Article published on November 25th 2011 | Data Recovery

Among the most annoying situations that can bug a user to certified madness, is windows crashing. This is something that is known for chain occurrence. Simply put, once a crash happens, the windows keep crashing innumerable times till the administrator locates what has gone wrong and where. There are many reason why windows crash at the very first place. This mainly includes hardware conflict, virus attacks, unstable power supply problems so on and so forth. Each of these causes and many more contribute to malfunction of windows and eventual crash which repeats itself indefinitely. With crash come loss of data and with loss of data comes the requirement of windows recovery. Following the popularity and use of windows, and the calculated possibility of malfunction, the experts have ensured that the users can access recovery softwares and tools as easily as they would want. This is one thing that adds some hope to those users who have lost valuable data on several windows crash.

The windows recovery disk is one of the many ways in which recovery can be aided. The disk usually contains the backup for the *â€˜factory condition or favorable condition of a computer as configured by an original equipment manufacturer or, end userâ€™ (*borrowed from Wikipedia). When the window crashes, it is not in the perfect state that it originally was or, was configured by the end user. With hazards like virus attacks, hardware conflict etc, the window functions unfavorably and very unlike the condition it came in at first. the recovery disk contains the back up for the favorable condition that can be restored in the crashed system and bring it back to proper functioning. The windows recovery disk can reformat the hard drive, reinstall the operating system and preloaded software as is required by the user.

Besides using the recovery disks there are other tools that can be used to ensure speedy recovery of the crashed window. Windows recovery USB can also be put into good use for achieving favorable results. The owners of net-pads can benefit a lot from this system of windows recovery. Windows recovery CDs can also be used for similar purposes. All of the mentioned is an attempt towards restoring the windows after it encounters difficulties and does not perform as it is supposed to or, collapses owing to a complete breakdown. While it is possible for the windows to recover completely using the USB, CD and the recovery disk, the owner will have to ensure that the process is carried on with adherence to the instructions. If the case is all about reinstallation, then the installation disks that had come initially with the computer can be good enough. But if the damage has gone beyond mere reinstallation, softwares may be required to deal with the same. System recovery is not a very simple task. However, with the use of appropriate tools, the crashed windows can be made to function as good as new. One may have to purchase the recovery softwares / tools from providers with a reasonable price.
