Experience Radiation Wonders through Aurora Sky Station by Julia Roger

Article published on June 12th 2012 | Destinations

The world is filled with many wonders. It is not only the seven wonders that need to be observed. There are a lot more to view in oneâ€™s lifetime. So, stop thinking and start to plan for a world trip. Yes, viewing all the remarkable wonders of this beautiful planet is the target to be achieved. But before starting for the journey, it is necessary to fetch all the necessary information about different places through which the expedition will continue.

Some of the notable sites that should not be given a miss include Pyramids, Great Wall of China, Taj Mahal, Amazon forest, etc. While Amazon is a dense forest that may not be fully explored, the other three are structures made by human beings. There are also several beauties of nature that should not be given a miss.

Witnessing the Aurora Sky Station is one such experience which will remain in the memory for a long time. Observing the northern lights through the station is truly remarkable. It happens when sun radiation rays clashes with those particles that are present within earthâ€™s atmosphere. The collision results in a wonderful outcome. Also it is to be remembered that such a happening takes place only 200 miles above the observers. Hence, it is an experience that is both remarkable and exciting. It surely creates a certain thrill through the spines. However, there is no hand of humans in such an occurrence. It is truly a trick of nature that generates those vibrant and beautiful colors and spreads them all throughout the sky.

Aurora sky station is situated within the abisko village region of Sweden. The settings within the station are simply astonishing. However, there is a great benefit of this village region. Around 80% of the year experiences clear blue sky in Abisko. This allows for greatest viewing pleasure of the astronomical clash and radiation effect in the sky.
